

Optimal Installation of AlphaLabs Change Simulations (Mac version)

You should have received via email a **Link** and a **Password**.

1. Click on the Link “**App Installation Link**” to first **download** the zip file. Double-click/open your download and DRAG the Simulation App on your **DESKTOP** (it will be automatically unzipped/decompressed).

***VERY IMPORTANT:** This app is still in **Beta**. Our Mac version is brand-new and still not notarized by Apple. Therefore, after downloading the compressed file and double-clicking on it, your Mac will give you a **warning message** and will prevent you to start it. Just click **OK** and then go to **System Preferences > Security & Privacy** and in the **General Tab** you should see the Simulation and you can click on “**Open Anyway**” - and “**Open**” again in case you are asked.*

2. If you want to **test** your installation, start the Simulation and click on the “**Test Simulation**” button on the first screen. You will have to provide your Password, and you will receive a message and sound feedback (to make you test if the sound volume is high enough).
3. **License File:** If you are using a recent version like *EIS Simulation 3.0, 2.66UX, KaiMan* or *Boost AI*, you will require a License File called “**EISSimLicense**” to be also located on your **DESKTOP**. Otherwise you might not be able to start new sessions.

Click on the Link “**License Installation Link**” to first **download** the zip file. Double-click/open your download and DRAG the file “EISSimLicense” on your **DESKTOP** (it will be automatically unzipped/decompressed).

Additional Note:

Before installing the Simulation make sure to **remove** all previously installed Simulation-related files (from the Desktop) to avoid mixing up License Files.

If you encounter any difficulties, please email sos@alpha-simulations.com and you will be contacted
